

Letter of Recommendation

I would like to recommend Mausami Basnet for admission to the graduate program at your university. I have known Mausami for about 2 now as an undergraduate student in Computer engineering. Moreover, I was the supervisor for her final year project. I taught her Electromagnetics, and Computer Architecture and Organization.

I recall Mausami as a confident and responsible student. She maintained excellent academic performance throughout her undergraduate ranking among the Top 10% students of her batch. As an instructor and her supervisor too I had enough opportunity to observe her capabilities closely.

shital is chor.

I was the supervisor in her project titled Video Compression with Deep Neural Network . I was quite impressed by her hardworking nature and learning capability. I could observe her keen interest and aptitude for research while working on the project. In fact, at the end of the project, she was also able to publish a paper on Paper KO Name.

I have noted her outstanding presentation skills while she presented her work at our department as well as in the conference. I have seen that she has good leadership capability and has a teamwork spirit. She is a well-spoken person with a friendly and gentle personality. She is very helpful and cooperative student. She eagerly handed over her project work to his juniors who wanted to further continue the research on the topic along with proper guidance and resources. I have also been impressed by her communication skills during project presentations and lectures.

I appreciate her technical and professional skills. Besides academics, she was also involved in several extra-curricular activities . She participated in various competitions organized in and off the campus. She has worked in some IT companies which, I believe, has further added to her technical skills and professional experience.

I am quite confident that Mausami's skills coupled with academic capability will make her a good candidate for your university. Thus, I would highly recommend her for the graduate program at your esteemed university. Please feel free to contact me if further enquiry is required.
